Research Interest

I work towards building a sustainable future for computing by providing system support for battery-less embedded devices. My research focuses on developing compiler and run-time techniques to enable long-running and computationally complex applications on embedded devices powered by harvested energy. I apply my work to mobile health, and building novice/maker tools for working with energy harvesting devices. My research interests also include wearable computing, low-power wireless sensors, and computer architecture.

I have published in 8 A*/A conferences (according to CORE rankings) such as Ubi-Comp(2x), SenSys, IPSN, EuroSys, EWSN, LCTES (2x), and top computing journal such as TECS and TCPS. My work has been covered by top media outlets such as Scientific American, TechCrunch, Gizmodo, Forbes, the ACM Tech News and many more.
