Research Interests

I build a **sustainable** future for computing by enabling the **Internet of Batteryless Things**; a vision that liberates Internet of Things (IoT) devices from batteries thus allowing maintenance-free operation. I develop **system support** that cuts across the system stack to ensure **energy-efficient, reliable, and adaptive** program execution while making computational progress under frequent power failures. I actively look to apply my work in mobile health, education, smart cities, and environmental monitoring to unlock new **applications**.

My work has appeared in the top computing journals and conferences such as **IMWUT, SenSys, IPSN, EuroSys, ACM TECS, and ACM TCPS**. It has been nominated for the **best paper award (EWSN)**, invited to the GetMobile magazine for the SIGMOBILE research highlight, and named a finalist for **Fast Company's Innovation by Design Award**. My work has been covered by top media outlets such ACM Tech News, Forbes, Tech Crunch, Gizmodo, and many more. As recognition of my work, I was selected for the prestigious **Alexandar Von Humboldt Postdoctoral Fellowship** and nominated for the College of Computing **Outstanding Postdoctoral Researcher Award** at the Georgia Institute of Technology.
